The presentation details are as follows:

- **NMG - High Grade Intersections Obtained at the Morrison Project in Ghana - Mr Wayne Norris, Managing Director.**
- **Presented by Wayne Norris, Managing Director**
- **Wednesday, 16 September 2009 11:00AM AEST**

Authorised by:

Wayne Norris
Managing Director

About Noble Mineral Resources Limited

Noble Mineral Resources Ltd ("Noble") is focussed on exploring for large-scale gold deposits in the world-class Ashanti Gold Belt in Ghana. Noble listed on the Australian Securities Exchange on 26 June 2008.

Noble's primary gold concessions are two Exploration Licences, **Cape Three Points** and **Tumentu**, which cover some 88km² and are located within the world-class Ashanti Gold Belt in south eastern Ghana. Ghana is the second largest gold producer in the African continent and is the 10th largest gold producing nation in the world, with annual production of approximately 2.4 million ounces.

Noble's immediate focus will be to evaluate the Cape Three Points Concession within the southern extension of the Ashanti Gold Belt. Initial exploration will be targeted towards the **Satin Mine Project** and the **Morrison Project**, which both lie in an area of historic underground gold production. Noble believes that there is significant potential for the delineation of additional high-grade gold mineralisation relating to the down-plunge and strike extension to these zones.

As well as these more advanced exploration opportunities, the Cape Three Points concession hosts three other project areas for immediate follow-up and five lower-priority prospect areas that Noble has earmarked for ongoing exploration.

The Tumentu Concession is located along strike between the Prestea gold mine and the 1.6 million ounce Salman-Anwia gold deposit currently being explored by ASX-listed Adamus Resources Limited. Artisanal mining, soil sampling, mapping and trench sampling, geological mapping and magnetic surveys have been undertaken and indicate anomalous gold levels within the concession.

The Company intends to apply the latest conceptual geological models and exploration strategies to these relatively under explored, highly prospective projects, with the aim of rapidly defining a JORC-compliant resource for development.
